

## **CHECKINBOX 1.5 README**

-----  
CheckInbox checks multiple POP3 email accounts. With five forms of alerting you to new emails, CheckInbox makes sure you are immediately notified if you have new email. It supports user settable check frequency, as well as options for starting up to the system tray. Version 1.5 adds the ability to backup your account settings from the "Help" menu, adds checking for an active Internet connection before connecting, additional error handling code, and an MSI-based installer. CheckInbox minimizes to your system tray, so it is out of the way while you work. CheckInbox comes with a 30-use trial period. CheckInbox is shareware, and costs \$10 US as a one-time payment with free upgrades; you may order it at <http://www.victechsoftware.com/register.html>. This program requires the Visual Basic 6.0 runtimes (MSVBVM60.DLL) and the Microsoft Windows Installer to install.
