

# Honeywell Publications Catalog

# **Honeywell Publications Catalog**

**APRIL 1984**

# Preface

This catalog supersedes Honeywell Publications Catalog, Order No. AB81, Rev. 14, dated May 1983, and its Addenda.

This catalog contains four separate index sections:

Section 1 lists publications by Base Number, sequenced alphanumerically by keywords in titles.

Section 2 lists publications according to the product line supported. Within each product line, titles are listed by hardware, software, applications and Field Engineering. Software and applications documents are further subdivided into their different types.

Section 3 lists publications alphanumerically by order number.

Section 4 lists data processing and Page Printing System forms, including selected illustrations.

In Sections 2 and 3, the listings indicate the order number, revision number, current prices, publication's title, and the page count.

The prices and policies shown are effective as of March 1984 and are subject to change without notice. Publications can also be withdrawn from distribution without notice if the information they contain becomes obsolete or if usage no longer justifies maintaining an inventory.

The following other catalogs are available at no charge:

AM50	Education Planning Guide
AM56	Education Schedule
CT50	Small Systems and Terminals Catalog
GF60	NDO Sales Catalog - Supplies & Accessories
GK51	NDO Sales Catalog - Hardware
SD01	GCOS 6 Software & Documentation Distribution Catalog

The information and specifications in this document are subject to change without notice. This document contains information about Honeywell products or services that may not be available outside the United States. Consult your Honeywell Marketing Representative.

# General Information

## ORDERING PROCEDURES

It is Honeywell's desire to provide our customers with the fastest, most efficient method of ordering and receiving publications. A standardized order entry form is included in the back of this catalog. Space is provided for a "ship to" and a "bill to" address, purchase order number and quantity. Requests for publications without the necessary billing authorization will be needlessly delayed.

Mail your order to:     Publications Services  
                              Honeywell Information Systems Inc.  
                              47 Harvard Street  
                              Westwood, MA 02090

Telecopier Service:   Panafax MN1200  
                              (617) 392-5262

Telecopier service is available for your convenience 24 hours a day, 7 days a week, to receive your orders or communications.

Hotline Service:       Customers only call: (617) 392-5235 or toll-free number  
                              1-800-343-6665  
                              Internal Honeywell call: (617) 392-5215

Hotline Service for emergency requirements that you "needed yesterday" is open weekdays from 8:00 A.M. to 4:30 P.M. Eastern Standard Time. When you call be prepared with your purchase order number. Please confirm all telephone orders in writing, annotated "This confirms my telephone order of . . ."

## Order Numbers

All publications have a base order number. In order to provide manuals that support specific software releases, the base number is modified by the specific revision.

The format is:

XXXX-RR   (manual)  
XXXX-RRA   (addendum)

Where:

XXXX   is the base Publication Order Number (e.g., CB05)  
RR     is the revision level (e.g., 01 = Revision 1)  
A     is the alphabetic designation of the addendum if any

For example:

CB05, Revision 1 would be expressed as CB05-01.  
CB05A, Revision 1 would be expressed as CB05-01A.

If you order a publication using only the base Publication Order Number, then you will receive the *latest* revision in stock. If you want an earlier version, then you *must* use this modified order number. Make sure that you specify the correct revision number if you want documentation supporting a specific software release.

For *hardware manuals*, do not specify the revision since only the latest revisions are retained in stock.

## INVOICES

Invoices for all orders, in duplicate only, are issued approximately 2 weeks after Shipment. Please note that our remittance address is printed on the top of each invoice. Please note this invoice number on your remittance.

You will be billed the current price, plus 4% for shipping and handling charges, as well as any applicable state, county, or city taxes.

## DISCOUNTS

Discounts are available (1) in a per-item quantity basis and (2) on the total dollar value of individual purchase orders.

1. Individual titles ordered in quantities of 50-99 each receive a 10% discount. Titles ordered in quantities of 100 or more each receive a 20% discount.
2. Individual purchase orders with a total dollar value of \$2,000 – \$3,999 receive a 10% discount. Orders for \$4,000 or more receive a 20% discount.

Purchase orders can qualify for only one discount: Individual line items or total dollar volume, whichever is larger, but not both. These discounts apply only to purchase orders for publications, not reprint rights.

## DELIVERY

Your rush orders will be shipped immediately upon our receipt of the order; regular orders will be shipped within one week. Accompanying the shipment will be a packing slip indicating items shipped — including quantity, backordered items, and items that do not exist on our files. (The latter category might contain items that had an incorrect order number or that may in fact be obsolete.) *It is not necessary to reorder an item on backorder. Backordered items are automatically shipped to you upon their receipt in our warehouse.*

## RETURNS OF CUSTOMER ORDERED PUBLICATIONS

Requests to return publications must be on the approved form, which is available on request. Any return made without use of this form will not be accepted or considered for credit. These authorization forms can be obtained from:

Publication Services  
Honeywell Information Systems, Inc.  
47 Harvard Street  
Westwood, MA 02090

(617) 392-5235 or toll-free number 1-800-343-6665

All returns must be the latest revision, in “like-new” condition (in the original shrink-wrap, when applicable). No return will be considered for credit if the shrink-wrap has been removed. All returns are subject to our approval.

No return will be accepted after 60 days of shipment. If within 60 days of shipment, credit will be 60% of price paid.

Any shipment returned to us which does not comply with the above will be sent back to you only at your expense.

## REPRINT POLICY

Honeywell will authorize the reproduction of certain publications by others. The royalty for reprint rights will be charged at a cost equal to 1/3 the published selling price of the particular publication times the number of copies to be reprinted. Discounts will be allowed per the following guidelines:

<u>Royalty Fee</u>	<u>Discount</u>
\$ 5,000 – 9,999	5%
\$ 10,000 – 19,999	10%
\$ 20,000 – 29,999	15%
\$ 30,000 – +	20%

Your request for reprint rights should be directed to:

Manager, Publications Services  
Honeywell Information Systems  
47 Harvard Street  
Westwood, MA 02090

Requests for reprints should include the following information:

1. Item(s) to be reprinted (include order number, title and revision)
2. Quantity to be printed on each item
3. Reason for requesting reprint

When granted, reprint rights will be effective for one year only. Subsequent requests will be treated separately and not added to the original request.

#### **NOTE TO HARDWARE CUSTOMERS**

It is Honeywell's policy to provide each new customer, excluding Level 6 & DPS 6, with an initial supply of publications at no charge. This initial supply will consist of 1 each of the required publications and can be equal in value up to five percent (5%) of one month's rental value of the particular equipment ordered to a maximum of \$1,000. The value of such initial supply of publications will be determined by the price schedule in the Publications Price Catalog. Requests for publications to be included as part of this initial allotment must be submitted by the Honeywell Marketing Representative handling your account. You cannot order these publications directly. It is the responsibility of the branch office to monitor each customer's initial allotment and to determine when the customer has received the number of publications to which he is entitled.

In addition, you will automatically be provided with revisions and/or addenda to publications pertaining to your system. New publications must be ordered by your Honeywell Marketing Representative.

If problems regarding the receipt of these publications occur, please contact:

Registration Coordinator  
Honeywell Information Systems  
47 Harvard Street  
Westwood, MA 02090  
or call: (617) 392-5214

Each Level 6 & DPS 6 customer will receive 1 copy of all manuals that support his system — hardware manuals with the system, and software manuals with the software, when it is ordered.

#### **BINDERS**

Three ring 8½ x 11 Blue Binders are available in 3 widths:

FC03 1"  
FC04 1½"  
FC05 2½"

**DESIGN CONSIDERATIONS**

Ref: Honeywell Format Cylinder Design Guide #AN 38 Rev. 1

- The scales at the top and bottom of this form are identical. They show the 2 page widths available on the Page Printing System: 8.5 and 11.0 inches. The flags associated with each width point to the last character position that can be used for variable data (position 91 and 132 at a horizontal spacing of 12.5 characters to the inch, and positions 80 and 105 at a spacing of 10 characters per inch). The minimum right margin for variable data is 0.250 inch from the edge of the page; that for format data is 0.125 inch.
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, common for all forms, is 0.250 inch for variable data and 0.125 inch for format data.
- Left and right margins can be made wider than the minimum depth by the omission of data from the spaces available. Wider margins are required for hole punching (0.625 inch left margin) and spiral binding (0.375 inch left margin); glue binding requires no extra space. A 0.625 inch margin would require 2 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10.0 characters per inch. A 0.375 inch left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT REMEMBER THIS FORM**, whenever the reason for omitting data from available space. Remembering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 95). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line" near the top of the scales indicates the last horizontal line position available for variable data whenever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum depth by the omission of data from the spaces available.
- Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data; blue for directions (screen type and area outline, font number, etc.). All rules, letters, and design lines in black will be in the final design.
- Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be furnished in place. Format data can be printed anywhere on a page (within the 0.125 inch margin).
- Where possible, locate vertical format lines in the center of a character column; left blank and horizontal format lines in the center of a line left blank. When necessary format lines may be drawn between characters or lines of variable data, however it is likely some interference may occur; the degree of interference can be minimized by using 90° rule bits.

- Draw fold marks in black; use line to indicate their distance in inches from the edge of the page.
- If the present design is to be registered with another design, attach a sample of the letter and enter the following information:  
 Registration Form \_\_\_\_\_  
 (Application Name and/or Form No.)
- If the present design replaces an existing design, enter the following information:  
 Honeywell Serial No. of Design Being Replaced \_\_\_\_\_  
 Status of Cylinder Being Replaced \_\_\_\_\_

NOTE: The page(s) on this form may vary due to atmospheric changes. To insure accuracy, use grid measurements as printed.

**DESIGN CONSIDERATIONS**

Ref. Honeywell Format Cylinder Design Guide #AH 56 Rev. 2

- The scales at the top and bottom of this form are identical. They show the 2 page widths available on the Page Printing System: 8.5 and 11.0 inches. The flags associated with each width point to the last character position that can be used for variable data (position 101 and 132 at a horizontal spacing of 12.5 characters to the inch, and positions 80 and 105 at a spacing of 10 characters per inch). The minimum right margin for variable data is 0.220 inch from the edge of the page; that for format data is 0.125 inch.
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.220 inch for variable data and 0.125 inch for format data.
- Left and right margins can be made wider than the minimum simply by the omission of data from the spaces available. Wider margins are required for hole punching (0.825 inch left margin) and spiral binding (0.375 inch left margin); glue binding requires no extra space. A 0.525 inch margin would require 5 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10.0 characters per inch. A 0.375 inch left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT REMEMBER THIS FORM**, whatever the reason for omitting data from available spaces. Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 89). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line" near the top of the scales indicates the first horizontal line position available for variable data whatever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum simply by the omission of data from the spaces available.
- Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data; blue for directions (green type and area outline, font number, etc.). All rules, letters, and designs drawn in black will be in the final design.
- Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125 inch margins).
- When possible, locate vertical format lines in the center of a character column; left blank and horizontal format lines in the center of a line left blank. When necessary format lines may be drawn between characters or lines of variable data however it is (usually some interference may occur); the degree of interference can be minimized by using FO rule size.

R-0	R-1	R-2
BR-0	BR-1	BR-2

- Draw fold marks in black; use blue to indicate their distance in inches from the edge of the page.
- If the present design is to be registered with another design, attach a sample of the letter and enter the following information:

Registration Form \_\_\_\_\_ (Application Name and/or Form No.)

- If the present design replaces an existing design, enter the following information:  
 Honeywell Serial No. of Design Being Replaced \_\_\_\_\_  
 Status of Cylinder Being Replaced \_\_\_\_\_

NOTE: The spacing on this form may vary due to atmospheric changes. To insure accuracy, use grid measurements as printed.

### DESIGN CONSIDERATIONS

Ref. Honeywell Format Cylinder Design Guide #AN 30 Rev. 1

- The scales at the top and bottom of this form are identical. They show the 2 page widths available on the Page Printing System: 8.5 and 11.0 inches. The flag associated with each width points to the last character position that can be used for variable data (position 101 and 132 at a horizontal spacing of 12.5 characters to the inch, and positions 80 and 105 at a spacing of 10 characters per inch). The minimum right margin for variable data is 0.220 inch from the edge of the page; that for format data is 0.125 inch.
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.220 inch for variable data and 0.125 inch for format data.
- Left and right margins can be made wider than the minimum simply by the omission of data from the spaces available. Wider margins are required for hole punching (0.625 inch left margin) and spiral binding (0.375 inch left margin); glue binding requires no extra space. A 0.625 inch left margin would require 5 blank character positions at a horizontal spacing of 12.5 characters per inch and 4 blank character positions at a horizontal spacing of 10.0 characters per inch. A 0.375 inch left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT RENUMBER THIS FORM, whatever the reason for omitting data from available spaces. Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 14 page lengths available on the Page Printing System: 3.0, 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 inches. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 93). The number of line positions available is directly related to the number of lines per inch selected (4, 5, 6, 8, or 10).
- The notation "line 1" near the top of the scales indicates the first horizontal line position available for variable data whatever the length of the page. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Top and bottom margins for variable data are as shown on the form. Margins for format data are 0.125 inch from the edge of the page. All margins can be made wider than the minimum simply by the omission of data from the spaces available.
- Observe the following color code strictly: red for variable data; blue for the outline of page size; black for format data; blue for directions (screen type and area outline, font number, etc.). All sizes, letters, and designs drawn in black will be in the final design.
- Use capital Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data area by placing Xs at the corner character positions and connecting them with diagonal lines.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125 inch margins).
- Where possible, locate vertical format lines in the center of a character column left blank and horizontal format lines in the center of a line left blank. When necessary format lines may be drawn between characters or lines of variable data however it is likely some interference may occur; the degree of interference can be minimized by using RD rule size.

**DESIGN CONSIDERATIONS**

Ref: Honeywell Format Cylinder Guide 2AN30

- As a first step - describe the desired page size outline in inches. Use capital ref Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing ref Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data field by placing ref Xs at the corner character positions and connecting them with diagonal lines.
- The scales at the top and bottom of this form are identical. They show the two page widths available on the Page Processing System: 8.5 and 11.0 in. The flags associated with each width point to the last character position that can be used for variable data within the format grid of a page width (positions 101 and 132 at a horizontal spacing of 12.5 characters/inch and positions 80 and 109 at a spacing of 10 characters/inch).
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.230 in. for variable data and 0.126 in. for format data.
- Left and right margins can be made wider than the minimum simply by omitting data from the spaces available. Wider margins are required for hole punching (0.826 in. left margin) and spiral binding (0.376 in. left margin); gum binding requires no extra space. A 0.826-in. left margin would require 6 blank character positions at a horizontal spacing of 12.5 characters/inch and 4 blank character positions at a horizontal spacing of 10.0 characters/inch. A 0.376-in. left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT RENUMBER THIS FORM. Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 13 page lengths available on the Page Processing System: 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 in. The flag associated with each length points to the last horizontal line position that can be used for variable data (from position 90 to position 808). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line 1" near the top of the scales indicates the first horizontal line position available for variable data, whatever the page length. Spaces above line 1 and below the last variable data line position for each page length is available only for format data.
- Observe the following color code strictly: Red Variable data, Blue Outline of page size, Directions (screen type and area outline, type style number, etc.), Black Format Data. All rules, letters, and dashes drawn in black will be in the final design.
- Draw format rules and print format data precisely. Legible copies of typewritten and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.126-in. margin). SEE NOTE.
- Where possible, locate vertical format lines in the center of a character column; left blank and horizontal format lines in the center of a line left blank. When necessary, format lines may be drawn between characters or lines of variable data. However, it is likely some interference may occur; the degree of interference can be estimated by using #2 rule coin.

- Draw fold marks in black. Use blue to indicate their distance in inches from the edge of the page.

NOTE: The spacing on this form may vary due to atmospheric changes. To insure accuracy, use grid measurements as printed.

No format data is allowed within 1/8" of any of the 4 sides of the page. Additionally, no format data is permissible in the left margin within 1" of the top and bottom of the page.

Page width & Length \_\_\_\_\_

**DESIGN CONSIDERATIONS**

Ref: Honeywell Format Cylinder Guide #RAN3B

- As a first step - describe the desired page size outline in blue. Use capital red Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing red Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data field by placing red Xs at the corner character positions and connecting them with diagonal lines.
- The scales at the top and bottom of this form are identical. They show the two page widths available on the Page Processing System: 8.5 and 11.0 in. The flags associated with each width point to the last character position that can be used for variable data within the format grid of a page width (positions 101 and 132 at a horizontal spacing of 12.5 characters/inch and positions 80 and 106 at a spacing of 10 characters/inch).
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character prime position available for variable data. The minimum left margin, constant for all forms, is 0.220 in. for variable data and 0.125 in. for format data.
- Left and right margins can be made wider than the minimum simply by omitting data from the spaces available. Wider margins are required for hole punching (0.825 in. left margin) and spiral binding (0.375 in. left margin); glue binding requires no extra space. A 0.825-in. left margin would require 5 blank character positions at a horizontal spacing of 12.5 characters/inch and 4 blank character positions at a horizontal spacing of 10.0 characters/inch. A 0.375-in. left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT RENUMBER THIS FORM.** Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 12 page lengths available on the Page Processing System: 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 in. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 83). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line 1" near the top of the scales indicates the first horizontal line position available for variable data, whatever the page length. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Observe the following color code strictly: Red Variable data, Blue Outlines of page size, Dimensions between type and line outline, type style number, etc.; Black Format Data. All rules, letters, and designs drawn in black will be in the final design.
- Draw format rules and print format data precisely. Legible copies of hightypes and other symbols may be retained in place. Format data can be printed anywhere on a page (within the 0.125-in. margin). SEE NOTE.
- Where possible, loose vertical format lines in the center of a character column left blank and horizontal format lines in the center of a line left blank. When necessary, format lines may be drawn between characters or lines of variable data. However, it is likely some interference may occur; the degree of interference can be minimized by using R-G rule size.

R-0	R-1	R-2
-----	-----	-----
R-0	R-1	R-2

- Draw fold marks in black. Use blue to indicate their distance in inches from the edge of the page.

INDICATE ANY SPECIAL INSTRUCTIONS BELOW

NOTE: The spacings on this form may vary due to atmospheric changes. To insure accuracy, use grid measurements as provided.

No format data is allowed within 1/8" of any of the 4 sides of the page. Additionally, no format data is permissible in the left margin within 1" of the top and bottom of the page.

DESIGN CONSIDERATIONS

Ref: Honeywell Format Cylinder Guide #AN30

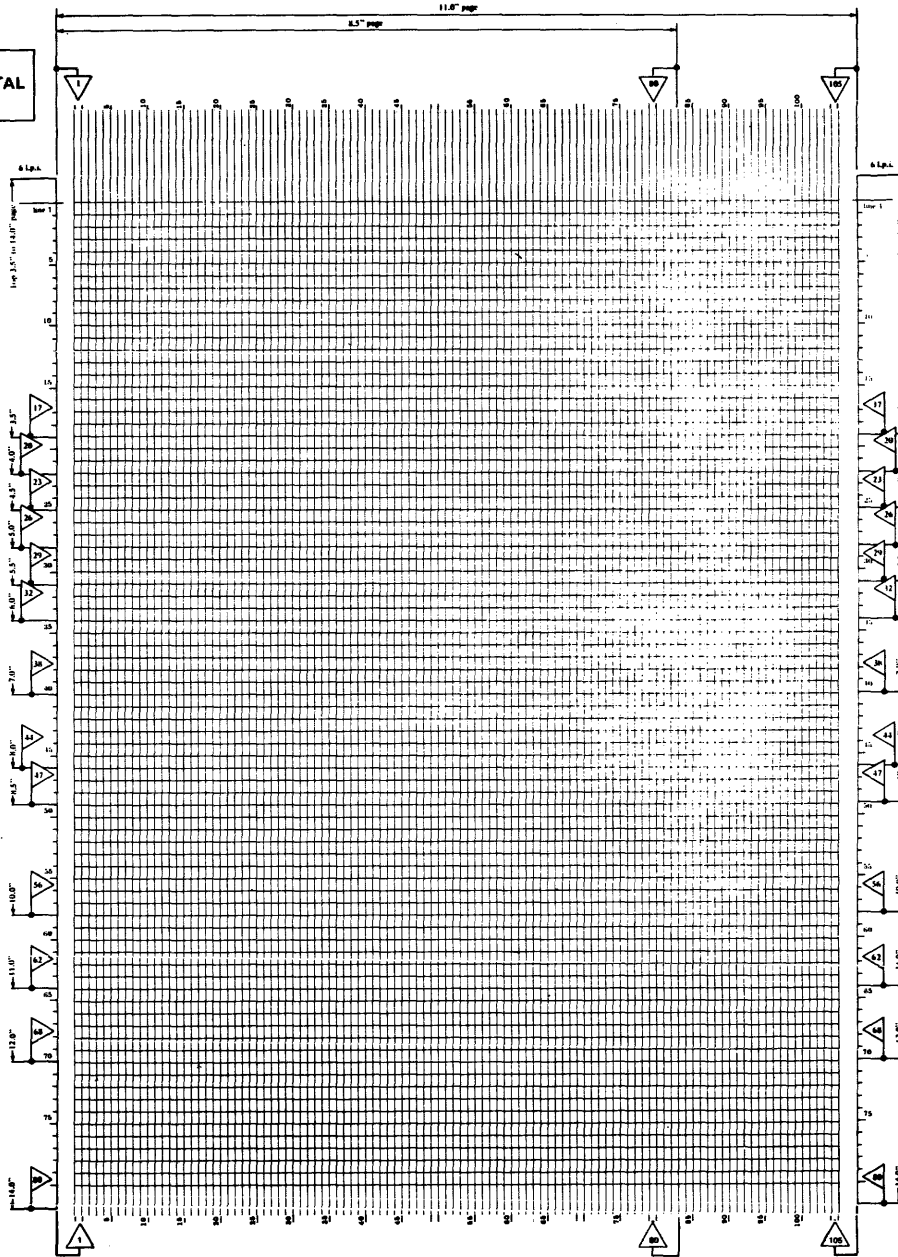

- As a first step - describe the desired page size outline in block. Use capital ref Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing ref Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data field by placing ref Xs at the corner character positions and connecting them with diagonal lines.
- The scales at the top and bottom of this form are identical. They show the two page widths available on the Page Processing System: 8.5 and 11.0 in. The flags associated with each width point to the last character position that can be used for variable data within the format grid of a page width (positions 101 and 132 at a horizontal spacing of 12.5 characters/inch and positions 80 and 108 at a spacing of 10 characters/inch).
- The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.230 in. for variable data and 0.125 in. for format data.
- Left and right margins can be made wider than the minimum simply by omitting data from the spaces available. Wider margins are required for hole punching (0.625 in. left margin) and spiral binding (0.375 in. left margin); plus binding requires no extra space. A 0.625-in. left margin would require 5 blank character positions at a horizontal spacing of 12.5 characters/inch and 4 blank character positions at a horizontal spacing of 10.0 characters/inch. A 0.375-in. left margin would require 2 blank character positions at either horizontal spacing.
- DO NOT REORDER THIS FORM. Reordering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
- The scales at the left and right of this form are identical. They show the 13 page lengths available on the Page Processing System: 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 in. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 83). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
- The notation "line 1" near the top of the scales indicates the first horizontal line position available for variable data, whatever the page length. Space above line 1 and below the last variable data line position for each page length is available only for format data.
- Observe the following color code strictly: Red Variable data, Blue Outline of page size, Directions (screen type and area outline, type style number, etc.), Black Format Data. All rules, letters, and design drawn in block will be in the first design.
- Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be fastened in place. Format data can be printed anywhere on a page (within the 0.125-in. margin). SEE NOTE.
- Where possible, locate vertical format lines in the center of a character column left blank and horizontal format lines in the center of a line left blank. When necessary, format lines may be drawn between characters or lines of variable data. However, it is likely some interference may occur; the degree of interference can be minimized by using R-0 rule size.

- Draw fold marks in block. Use blue to indicate their distance in inches from the edge of the page.

- As a first step - describe the desired page size outline in blue. Use capital red Xs to indicate spaces occupied by variable data. Show the extent of a horizontal data field by placing red Xs in the first and last character positions of the field and connecting them with a single line. Show the maximum extent of a vertical data field by placing red Xs at the corner character positions and connecting them with diagonal lines.
  - The scales at the top and bottom of this form are identical. They show the two page widths available on the Page Processing System: 8.5 and 11.0 in. The flags associated with each width point to the last character position that can be used for variable data within the format grid of a page width (positions 101 and 122 at a horizontal spacing of 12.5 characters/inch and positions 80 and 105 at a spacing of 10 characters/inch).
  - The flag labeled "1" at the extreme left of the top and bottom scales points to the first character print position available for variable data. The minimum left margin, constant for all forms, is 0.293 in. for variable data and 0.125 in. for format data.
  - Left and right margins can be made wider than the minimum simply by omitting data from the spaces available. Wider margins are required for hole punching (0.625 in. left margin) and spiral binding (0.375 in. left margin); plus binding requires no extra space. A 0.625-in. left margin would require 5 blank character positions at a horizontal spacing of 12.5 characters/inch and 4 blank character positions at a horizontal spacing of 10.0 characters/inch. A 0.375-in. left margin would require 2 blank character positions at either horizontal spacing.
  - DO NOT RENUMBER THIS FORM.** Renumbering would make costly additional steps necessary for cylinder manufacture and would result in considerable additional charges.
  - The scales at the left and right of the form are identical. They show the 13 page lengths available on the Page Processing System: 3.5, 4.0, 4.5, 5.0, 5.5, 6.0, 7.0, 8.0, 8.5, 10.0, 11.0, 12.0, and 14.0 in. The flags associated with each length point to the last horizontal line position that can be used for variable data (from position 10 to position 99). The number of line positions available is directly related to the number of lines per inch selected (4, 6, 8, or 10).
  - The notation "line 1" near the top of the scales indicates the first horizontal line position available for variable data, wherever the page length. Show above line 1 and below the last variable data line position for each page length is available only for format data.
  - Observe the following color code strictly: *Red* Variable data, *Blue* Outline of page size, *Directions* (arrow types and area outline, type style number, etc.), *Black* Format Data. All rules, letters, and designs drawn in black will be in the final design.
  - Draw format rules and print format data precisely. Legible copies of logotypes and other symbols may be furnished in place. Format data can be printed anywhere on a page (within the 0.125-in. margin). SEE NOTE.
  - Where possible, locate vertical format lines in the center of a character column left blank and horizontal format lines in the center of a line left blank. When necessary, format lines may be drawn between characters or lines of variable data. However, it is likely some overference may occur; the degree of overference can be minimized by using R-0 rule size.

# HONEYWELL PUBLICATIONS CATALOG ADDENDUM G

## SUBJECT

Additions and Changes to the Manual

## SPECIAL INSTRUCTIONS

This is the seventh addendum to the *Honeywell Publications Catalog*, Order No. AB81-14 dated May 1983 and replaces all previous addenda. This addendum consists of two listings: new and revised items sorted by product line; and new and revised items listed in alphanumeric order. Those items with G preceding the title are new listings.

**Telephone Orders:** When you place an order by telephone, be prepared with your Purchase Order No. Please confirm all telephone orders in writing, specifying, "This confirms my telephone order of . . ."

Honeywell cannot be held responsible for duplicate shipments which are a result of noncompliance of this procedure, and no returns will be allowed.

### **RETURNS - Effective February 1, 1984**

Requests to return publications must be on the approved form, which is available on request. Any return made without use of this form will not be accepted or considered for credit. These authorization forms can be obtained from:

Publication Services  
Honeywell Information Systems Inc.  
47 Harvard Street  
Westwood, MA 02090  
(617) 392-5235 or toll-free number 1-800-343-6665

All returns must be the latest revision, in "like-new" condition (in the original shrink-wrap when applicable), and are subject to our approval.

- if within 30 days of shipment, credit will be 50% of price paid.
- if within 31 to 60 days of shipment, credit will not exceed 25% and will be conditional on inventory and continuing demand.

No return will be accepted after 60 days of shipment.

# HONEYWELL PUBLICATIONS CATALOG ADDENDUM A

## SUBJECT

Additions and Changes to the Manual

## SPECIAL INSTRUCTIONS

This is the first addendum to the *Honeywell Publications Catalog*, Order No. AB81-15 dated April 1984. This addendum consists of two listings: new and revised items sorted by product line; and new and revised items listed in alphanumeric order. Those items with A preceding the title are new listings.

### Note:

Effective immediately, on page iv in the Catalog AB81-15, under DISCOUNTS, the last paragraph is changed to read as follows:

Purchase orders can qualify for only one discount: individual line items or total dollar volume, whichever is larger, but not both. These discounts apply only to purchase orders for publications, not reprint rights, templates, or forms.

## ORDER NUMBER

AB81-15A

# HONEYWELL PUBLICATIONS CATALOG ADDENDUM B

## SUBJECT

Additions and Changes to the Manual

## SPECIAL INSTRUCTIONS

This is the second addendum to the *Honeywell Publications Catalog*, Order No. AB81-15 dated April 1984, and supersedes Addendum A. This addendum consists of two listings: new and revised items sorted by product line; and new and revised items listed in alphanumeric order. Those items with B preceding the title are new listings.

### **Note:**

Effective immediately, on page iv in the Catalog AB81-15, under DISCOUNTS, the last paragraph is changed to read as follows:

Purchase orders can qualify for only one discount: individual line items or total dollar volume, whichever is larger, but not both. These discounts apply only to purchase orders for publications, not reprint rights, templates, or forms.

## ORDER NUMBER

AB81-15B

July 1984

40737  
10684  
Printed in U.S.A.

# Honeywell

# HONEYWELL PUBLICATIONS CATALOG ADDENDUM C

## SUBJECT

Additions and Changes to the Manual

## SPECIAL INSTRUCTIONS

This is the third addendum to the *Honeywell Publications Catalog*, Order No. AB81-15 dated April 1984, and supersedes all previous Addenda. This addendum consists of two listings: new and revised items sorted by product line; and new and revised items listed in alphanumeric order. Those items with C preceding the title are new listings.

### **Note:**

Effective immediately, on page iv in the Catalog AB81-15, under DISCOUNTS, the last paragraph is changed to read as follows:

Purchase orders can qualify for only one discount: individual line items or total dollar volume, whichever is larger, but not both. These discounts apply only to purchase orders for publications, not reprint rights, templates, or forms.

## ORDER NUMBER

AB81-15C

August 1984

HONEYWELL PUBLICATIONS CATALOG  
ADDENDUM D

SUBJECT

Additions and Changes to the Manual

SPECIAL INSTRUCTIONS

This is the fourth addendum to the *Honeywell Publications Catalog*, Order No. AB81-15 dated April 1984, and supersedes all previous Addenda. This addendum consists of two listings: new and revised items sorted by product line; and new and revised items listed in alphanumeric order. Those items with D preceding the title are new listings.

**Note:**

Effective immediately, on page iv in the Catalog AB81-15, under DISCOUNTS, the last paragraph is changed to read as follows:

Purchase orders can qualify for only one discount: individual line items or total dollar volume, whichever is larger, but not both. These discounts apply only to purchase orders for publications, not reprint rights, templates, or forms.

ORDER NUMBER
