

Authors

Albert V. Ferris-Prabhu

System Products Division, Burlington Laboratory, Essex Junction, Vermont

Dr. Ferris-Prabhu is an Advisory Physicist engaged in the investigation of memory devices in Exploratory Memory Development at the laboratory in Burlington. His education includes a B.M.E. from the University of Dayton in 1957, an M.S.E. from Princeton University in 1960 and a Ph.D. in Solid State Physics from the Catholic University of America in 1963. Prior to his employment with IBM in 1968, he was a post-doctoral Research Associate at the Massachusetts Institute of Technology from 1963 to 1964 and was on the staff of the Goddard Space Flight Center from 1964 to 1966. He was also Assistant Professor of Applied Science at the George Washington University from 1966 to 1968. Dr. Ferris-Prabhu is a member of Tau Beta Pi, Sigma Xi, the American Physical Society and the New York Academy of Sciences.

Maurice Karnaugh

Thomas J. Watson Research Center, Yorktown Heights, New York

Dr. Karnaugh is a member of the communication sciences group at the Research Center. He joined the Federal Systems Division of IBM in 1966 where he studied large communication systems designs, including both cable and satellite transmission channels. Since 1970, he has been with the Research Division, where he has worked on a variety of topics in signal processing, switching, and the automatic layout of large communication networks. From 1952 to 1966, Dr. Karnaugh was a member of the technical staff of the Bell Telephone Laboratories where he worked on logic design methods, magnetic logic, digital switching, digital transmission and analog to digital conversion. He received a Ph.D. degree in Theoretical Physics from Yale University in 1952. He is a member of the IEEE, the IEEE Communications Society, Phi Beta Kappa, and Sigma Xi.

Peter A. W. Lewis

Naval Postgraduate School, Monterey, California

Professor Lewis, who is currently a consultant to The IBM Research Division as well as to other organizations, was previously a staff member in the Research Division from 1955 to 1971. He is also a Professor of Operations Research and Statistics at the Naval Postgraduate School in Monterey. Professor Lewis received an A.B. degree from Columbia College, Columbia University in 1954, a B.S. and an M.S. in Electronic Engineering from Columbia University Engineering School in 1955 and 1957, respectively, and a Ph.D. in Statistics from the University of London in 1964. From 1969 to 1970 he was an NIH Special Fellow at Imperial College, University of London. He is a member of the Royal Statistical Society, the American Sta-

tistical Association, the Institute of Mathematical Statistics and the Biometric Society. He is coauthor with D. R. Cox of the book *The Statistical Analysis of Series of Events*, and recently edited a volume entitled *Stochastic Point Processes: Statistical Analysis, Theory and Applications*.

Trenchard More, Jr.

Data Processing Division, Scientific Center, Philadelphia, Pennsylvania

Dr. More is a scientific staff member of the Philadelphia Scientific Center. He joined the Thomas J. Watson Research Center in 1968 after having worked for the Center during the summers of 1956 to 1958 on the automatic proof of logical theorems. In the summer of 1955, he worked at the Bell Telephone Laboratories on the systems design of the Electronic Central Office. He received an A.B. degree in Mathematics from Harvard College, 1952, and the S.M. and Ph.D. degrees in Electrical Engineering from M.I.T. in 1957 and 1962, respectively. His dissertation was in the field of mathematical logic. While at M.I.T., Dr. More received the Tillotson Fellowship, 1955 to 1957; was a Teaching Assistant, 1957 to 1959; Instructor, 1959 to 1962; and Assistant Professor—Postdoctoral Engineering Fellow, 1962 to 1964. He received an award for excellence in teaching in 1960. As an Assistant Professor at Yale University, 1964 to 1968, he introduced a series of courses in applied modern algebra and discrete mathematics. He held a Yale Junior Faculty Fellowship from 1967 to 1968 and left the University as an Associate Professor in 1968. He is a member of Sigma Xi, Tau Beta Pi, the Association for Symbolic Logic, and the American Mathematical Society.

Jorma Rissanen

Research Division, San Jose, California

Dr. Rissanen is a member of the Systems Department in the San Jose Research Laboratory and has been with IBM since 1961. He received his Engineer's Diploma in Electrical Engineering in 1956, Licenciante of Technology in 1960, and Doctor of Technology in Control Theory and Mathematics in 1965, all from the Technical University of Helsinki, Finland. His research interests are information science, control, automata, systems theory, mathematical programming and the mathematics of computation.

Gerald S. Shedler

Research Division, San Jose, California

Mr. Shedler is Manager of Storage Systems Modeling and Analysis at the Research Laboratory in San Jose. Prior to joining IBM in 1965 as a member of the Computer Science Department at the Research Center in Yorktown Heights, he received a B.A. degree in Mathematics from Amherst College in 1961 and an M.A. in Mathematics from Tufts University in 1964. Mr. Shedler's major interests are applied probability, queuing theory, and the mathematical modeling of computer systems. He is a member of the Association for Computing Machinery.

E. Webb Stacy

System Products Division, Endicott, New York

Dr. Stacy has been with IBM since 1960 and is a Senior Statistician in a process development group in Endicott. Previous assignments have included work in product reliability and serviceability, and statistical consultant services. His education includes B.A. and M.A. degrees in Mathematics and a Ph.D. in Statistics, which he received from the University of North Carolina in 1940, 1949 and 1960, respectively. In 1950, he was an Assistant Professor of Statistics at the University of Wyoming. He worked from 1951 to 1960 as a civilian Operations Analyst for the United States Air Force. He has taught in IBM voluntary educational programs and in 1969 was Adjunct Professor of Statistics at the State University of New York at Binghamton. Dr. Stacy is a member of the Institute of Mathematical Statistics, the American Statistical Association, the Econometric Society of America, and the Operations Research Society of America.

Jan A. van der Pool

IBM Nederland, Amsterdam, The Netherlands

Mr. van der Pool is Scientific Relations Manager of IBM Nederland in Amsterdam, The Netherlands. He holds a doctorate in Mathematics from the University of Utrecht in The Netherlands, which he received in 1947. He was a teacher in the Dutch Secondary School System until 1948 and worked in the Actuarial Department of the Nationale Levensverzekering-Bank in The Netherlands from 1948 until joining IBM in 1957. He was among the first in Europe to use computers for actuarial computations. Prior to his present position, he had been Manager of Applied Science, Advisory Systems Engineer, and Scientific Marketing Manager in IBM Nederland. The work described in the paper was done during an assignment with the IBM Research Department of Information Sciences, in San Jose from 1970 until 1972. He is a member of the Dutch Mathematical Society, Dutch Computer Society, Sectie Operationele Research, and the Association for Computing Machinery.

Preface: Mathematics of Numerical Computation by <i>S. Winograd</i>	334	Numerical Properties of a Multivariate Ritz-Trefftz Method by <i>W. E. Bosarge, Jr. and C. L. Smith</i>	393
• <i>Integration of Differential Equations</i>		Recursive Evaluation of Padé Approximants for Matrix Sequences by <i>J. Rissanen</i>	401
<i>A</i> -stable, Accurate Averaging of Multistep Methods for Stiff Differential Equations by <i>W. Liniger and F. Odeh</i>	335	• <i>Optimization</i>	
Hopscotch Difference Methods for Nonlinear Hyperbolic Systems by <i>A. R. Gourlay and J. Ll. Morris</i>	349	On the Convergence of Gradient Methods under Constraint by <i>P. Wolfe</i>	407
Parallel Shooting Method for Boundary-value Problems: Application to the Neutron Transport Equation by <i>J. Canosa and H. R. Penafiel</i>	354	Finding All Shortest Distances in a Directed Network by <i>A. J. Hoffman and S. Winograd</i>	412
Finite Difference Formulas for Neumann Conditions on Irregularly Shaped Boundaries by <i>L. E. Alsop and A. S. Goodman</i>	365	Maintaining a Sparse Inverse in the Simplex Method by <i>J. A. Tomlin</i>	415
• <i>Approximation</i>		Mixed-integer Algorithms for the (0,1) Knapsack Problem by <i>M. M. Guignard and K. Spielberg</i>	424
Turán Formulae and Highest Precision Quadrature Rules for Chebyshev Coefficients by <i>C. A. Micchelli and T. J. Rivlin</i>	372	• <i>Communications</i>	
Automatic Computation of Exponentials, Logarithms, Ratios and Square Roots by <i>T. C. Chen</i>	380	Linear Convergence of the Conjugate Gradient Method by <i>H. P. Crowder and P. Wolfe</i>	431
Enveloping an Iteration Scheme by <i>W. L. Miranker</i>	389	On the Davidenko-Branin Method for Solving Simultaneous Nonlinear Equations by <i>R. P. Brent</i>	434
