

# Contents of Volume 41, 2002

|                                                          |     |                                                          |     |
|----------------------------------------------------------|-----|----------------------------------------------------------|-----|
| <b>Number One (G321-0144)</b>                            |     | Web services and business process management             | 198 |
| Software debugging, testing, and verification            | 4   | <i>F. Leymann, D. Roller, and M.-T. Schmidt</i>          |     |
| <i>B. Hailpern and P. Santhanam</i>                      |     | Web services management approaches                       | 212 |
| Metrics to evaluate vendor-developed software            | 13  | <i>J. A. Farrell and H. Kreger</i>                       |     |
| based on test case execution results                     |     | Securing Web services                                    | 228 |
| <i>K. Bassin, S. Biyani, and P. Santhanam</i>            |     | <i>M. Hondo, N. Nagaratnam, and A. Nadalin</i>           |     |
| Improving software testing via ODC: Three case           | 31  | A platform for business-to-business sell-side,           | 242 |
| studies                                                  |     | private exchanges and marketplaces                       |     |
| <i>M. Butcher, H. Munro, and T. Kratschmer</i>           |     | <i>J. Sairamesh, R. Mohan, M. Kumar, L. Hasson,</i>      |     |
| A metric for predicting the performance of an            | 45  | <i>and C. Bender</i>                                     |     |
| application under a growing workload                     |     | A framework-based approach to building private           | 253 |
| <i>E. J. Weyuker and A. Avritzer</i>                     |     | trading exchanges                                        |     |
| Testing z/OS: The premier operating system for           | 55  | <i>S. Kumaran, Y. Huang, and J.-Y. Chung</i>             |     |
| IBM's zSeries server                                     |     | E-commerce interoperability with IBM's                   | 272 |
| <i>S. Loveland, G. Miller, R. Prewitt, and</i>           |     | WebSphere Commerce products                              |     |
| <i>M. Shannon</i>                                        |     | <i>D. M. Dias, S. L. Palmer, J. T. Rayfield,</i>         |     |
| The STCL test tools architecture                         | 74  | <i>H. H. Shaikh, and T. K. Sreeram</i>                   |     |
| <i>C. Williams, H. Sluiman, D. Pitcher, M. Slavescu,</i> |     | Applications of flexible pricing in business-to-         | 287 |
| <i>J. Sprately, M. Brodhun, J. McLean, C. Rankin,</i>    |     | business electronic commerce                             |     |
| <i>and K. Rosengren</i>                                  |     | <i>M. Bichler, J. Kalagnanam, K. Katircioglu,</i>        |     |
| Using a model-based test generator to test for           | 89  | <i>A. J. King, R. D. Lawrence, H. S. Lee, G. Y. Lin,</i> |     |
| standard conformance                                     |     | <i>and Y. Lu</i>                                         |     |
| <i>E. Farchi, A. Hartman, and S. S. Pinter</i>           |     | Instance-level access control for business-to-           | 303 |
| Multithreaded Java program test generation               | 111 | business electronic commerce                             |     |
| <i>O. Edelstein, E. Farchi, Y. Nir, G. Ratsaby,</i>      |     | <i>R. Goodwin, S. F. Goh, and F. Y. Wu</i>               |     |
| <i>and S. Ur</i>                                         |     | <b>Number Three (G321-0146)</b>                          |     |
| The Software Testing Automation Framework                | 126 | Architectures for intelligent systems                    | 331 |
| <i>C. Rankin</i>                                         |     | <i>J. F. Sowa</i>                                        |     |
| FLAVERS: A finite state verification technique           | 140 | ABLE: A toolkit for building multiagent                  | 350 |
| for software systems                                     |     | autonomic systems                                        |     |
| <i>J. M. Cobleigh, L. A. Clarke, and L. J. Osterwell</i> |     | <i>J. P. Bigus, D. A. Schlosnagle, J. R. Pilgrim,</i>    |     |
| <b>Number Two (G321-0145)</b>                            |     | <i>W. N. Mills III, and Y. Diaio</i>                     |     |
| Introduction to Web services architecture                | 170 | Intelligent probing: A cost-effective approach to        | 372 |
| <i>K. Gottschalk, S. Graham, H. Kreger, and J. Snell</i> |     | fault diagnosis in computer networks                     |     |
| Developing XML Web services with WebSphere               | 178 | <i>M. Brodie, I. Rish, and S. Ma</i>                     |     |
| Studio Application Developer                             |     |                                                          |     |
| <i>C. Lau and A. Ryman</i>                               |     |                                                          |     |

|                                                                                                                                                                                        |     |                                                                                                                                         |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------------------------------------------------------------------------------------------------------------------------------------|-----|
| Using a constraint satisfaction formulation and solution techniques for random test program generation<br><i>E. Bin, R. Emek, G. Shurek, and A. Ziv</i>                                | 386 | Data integration through database federation<br><i>L. M. Haas, E. T. Lin, and M. A. Roth</i>                                            | 578 |
| Using fuzzy control to maximize profits in service level management<br><i>Y. Diao, J. L. Hellerstein, and S. Parekh</i>                                                                | 403 | XQuery: An XML query language<br><i>D. Chamberlin</i>                                                                                   | 597 |
| Automated generation of model cases for help-desk applications<br><i>S. M. Weiss and C. V. Apte</i>                                                                                    | 421 | XTABLES: Bridging relational technology and XML<br><i>J. E. Funderburk, G. Kiernan, J. Shanmugasundaram, E. Shekita, and C. Wei</i>     | 616 |
| A decision-tree-based symbolic rule induction system for text categorization<br><i>D. E. Johnson, F. J. Oles, T. Zhang, and T. Goetz</i>                                               | 428 | XML programming with SQL/XML and XQuery<br><i>J. E. Funderburk, S. Malaika, and B. Reinwald</i>                                         | 642 |
| A probabilistic estimation framework for predictive modeling analytics<br><i>C. V. Apte, R. Natarajan, E. P. D. Pednault, and F. A. Tipu</i>                                           | 438 | DB2 and Web services<br><i>S. Malaika, C. J. Nelin, R. Qu, B. Reinwald, and D. C. Wolfson</i>                                           | 666 |
| Cross training and its application to skill mining<br><i>D. A. Oblinger, M. Reid, M. Brodie, and R. de Salvo Braz</i>                                                                  | 449 | Bringing together content and data management systems: Challenges and opportunities<br><i>A. Somani, D. Choy, and J. C. Kleewein</i>    | 686 |
| Predictive algorithms in the management of computer systems<br><i>R. Vilalta, C. V. Apte, J. L. Hellerstein, S. Ma, and S. M. Weiss</i>                                                | 461 | The integration of business intelligence and knowledge management<br><i>W. F. Cody, J. T. Kreulen, V. Krishna, and W. S. Spangler</i>   | 697 |
| Discovering actionable patterns in event data<br><i>J. L. Hellerstein, S. Ma, and C.-S. Perng</i>                                                                                      | 475 | Relational extensions for OLAP<br><i>N. Colossi, W. Malloy, and B. Reinwald</i>                                                         | 714 |
| Machine learning in a multimedia document retrieval framework<br><i>M. P. Perrone, G. F. Russell, and A. Ziq</i>                                                                       | 494 | Using flows in information integration<br><i>F. Leymann and D. Roller</i>                                                               | 732 |
| Applying machine learning to automated information graphics generation<br><i>M. X. Zhou, S. Ma, and Y. Feng</i>                                                                        | 504 | Extending the concept of transaction compensation<br><i>M. Chessell, C. Griffin, D. Vines, M. Butler, C. Ferreira, and P. Henderson</i> | 743 |
| Technical forum<br>Machine intelligence and the Turing Test<br><i>I. Brackenbury and Y. Ravin</i>                                                                                      | 524 | Technical forum<br>Selling interrupt rights: A way to control unwanted e-mail and telephone calls<br><i>S. E. Fahlman</i>               | 759 |
| An architecture of diversity for commonsense reasoning<br><i>J. McCarthy, M. Minsky, A. Sloman, L. Gong, T. Lau, L. Morgenstern, E. T. Mueller, D. Riecken, M. Singh, and P. Singh</i> |     | Note—Numbers in parentheses after issue numbers denote the issue order numbers.                                                         |     |
| <b>Number Four (G321-0147)</b>                                                                                                                                                         |     |                                                                                                                                         |     |
| Information integration: A research agenda<br><i>A. D. Jhingran, N. Mattos, and H. Pirahesh</i>                                                                                        | 555 |                                                                                                                                         |     |
| Information integration: A new generation of information technology<br><i>M. A. Roth, D. C. Wolfson, J. C. Kleewein, and C. J. Nelin</i>                                               | 563 |                                                                                                                                         |     |
