

PROCESSOR TECHNOLOGY CORPORATION

CC-16 Card Cage Instructions (Preliminary)

The CC-16 Card Cage is designed for use with the Altair 8800 computer in conjunction with the Processor Technology MB-1 Mother Board, or on special order with 88-EC cards.

The predrilled anodized aluminum support members (left and right are interchangeable) are to be mounted onto the Altair chassis using holes already provided (see figure 1). We recommend using the fifth holes from the top on the inside columns. Four 4-40 x $\frac{1}{4}$ " screws, lockwashers and hex nuts are provided. The horizontal surfaces of the angle brackets should be positioned toward the top of the computer.

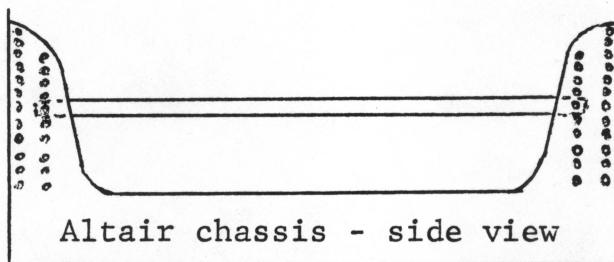

Figure 1

The two Delrin rods should be positioned with slots facing each other and the four equally spaced slots at the right hand side of the computer.

The four 4-40 x $\frac{5}{8}$ " screws should be dropped into the proper holes in the aluminum support brackets. The Delrin rods are then placed on the screws with the lockwashers and hex nuts following.

Your installation is now complete. To add additional boards to your Altair, you now need only to order additional 100PC connectors and solder in place.
