

Support Note: 272

Product: MPEGStar

Operating System: Windows 95

Subject: MMYSTEM276 errors when playing MPEG clips

June 12, 1997

When using versions 4.3.1 or 4.3.2 of the GrafixStar 400 Windows 95 drivers, you might experience MMSYSTEM276 error messages when trying to play MPEG clips. [Patch 272](#) fixes this problem.

To install Patch 272, copy the file rfmdd.dll into your windows\system directory, where it will replace an older version of this file. This is assuming that the folder in which you have installed Windows is called Windows.
