

NAME

dd_look -- send wakeup signal to a process

SYNOPSIS

/prog/dd_look pid

DESCRIPTION

This program will send a wake up signal to the named process in order to check its existence. It is intended to be used by programs which access the .ddcntl file associated with Data Distributer program for Common Analysis. The argument pid is the process ID of the process to be awakened.

This subroutine must run as root so it can send a signal to any other process.

The exit status of this program defines the success of the signalling attempt:

- 2 some problem occurred.
- 1 process to be awakened does not exist.
- 0 process to be awakened does exist.
