NAME
    dltclli - delete office's CLLI code translation.

SYNOPSIS
    #include "ofcclli.h"

    dltclli(ofcp)
        char *ofcp;   /* office name string */

DESCRIPTION
    Dltclli deletes the Common Language Location Identification
    (CLLI) code for the specified office. It assumes the office name
    is pointed to by ofcp and is null-terminated. Dltclli scans the
    file /sccetc/ofcclli and blanks out every entry which has the
    specified office name in the entry's office name field.

    The /sccetc/ofcclli file is maintained by the commands RC:CLLI
    and VRFY:CLLI.

FILES
    /sccetc/ofcclli

LIBRARY
    /lib/lib1.a

SEE ALSO
    clliofc(3L), ofcclli(3L)

DIAGNOSTICS
    None; system errors are reported in standard SCCS fashion but no
    indication is returned to the caller.
